FOR IMMEDIATE RELEASE

A WHOLE NEW APPROACH

Hobart, IN--- As leaders in the field of preparing students for high-demand and high-paying careers as court reporters, stenographers, broadcast captioners, and communication access realtime translation (CART) reporters, we've made a substantial investment of capital and time to perfect the delivery of court reporting education. This blended learning environment was created to bring students and their teachers together as never before.

With over 25 years of experience in court reporting education, the faculty and staff at the College of Court Reporting played an important role in developing four key technologies that are important in assisting court reporting students who learn from a distance or from within a traditional brick-and-mortar learning environment develop their skills in the least amount of time. CCR continues to lead the way in court reporting education by implementing the ev360. There are four key technologies to the ev360:

Time Management: The first of its kind for court reporting students struggling to manage all of life's responsibilities and trying to manage their time for skill development practice; a time management planner that integrates all of the necessary components of a well-balanced academic and skill-development plan.

ev360 Skill Development: A unique way of practicing skill development. From variable text practice to variable audio practice to self-evaluation, custom class creation is at your finger tips.

ev360 SAP Evaluations: A unique approach to delivering, attempting, and submitting evaluations (tests) that count towards each student's individual academic progress. Intuitive technology administers evaluations based on individual student's qualifications, prerequisites, skill ability, current endurance, and transcription accuracy.

ev360 Communicate: A truly interactive delivery method of submitting ev360 SAP evaluations. When a student submits a transcribed evaluation, they receive instant preliminary results, including total errors and percentage of accuracy. No more waiting for evaluation results. Every evaluation receives thorough interactive faculty coaching, evaluation, and feedback. When an evaluation is above a minimum percentage of accuracy, it is put through a two-step faculty review process for final grading and punctuation. Once the evaluation is ready, the student receives the final results with additional interactive faculty coaching, evaluation, and feedback on the student's performance.

The leader in online court reporting education!

The College of Court Reporting has day and online programs and offers students an Associate of Applied Science degree in court reporting. Final registration for the fall semester is September 15, 2010. For more information, contact Nicole Rodriguez at 866-294-3974.
